*Baby birds need healthy , safe yards  
and areas in which grow and  
become breeding adults*

Newly hatched chickadee learning to land on feeders

### ***Puget Sound Bird Observatory***

studies birds and their habitats in the Pacific Northwest to better understand changes in bird populations, to inform decision makers, and to engage the public with birds and their needs.

The Puget Sound Bird Observatory and Shoreline's Community Wildlife Habitat Project have teamed together to study how urban Puget Sound supports the songbirds that spend the winter here by banding in local National Wildlife Certified Backyards for population baselines. The Lake Forest Park Stewardship Foundation has joined us in this study.
